LexisNexis Brings Real-Time Reporting to Workflow Solution with OpenEdge

AT A GLANCE

LexisNexis®

Reporting is a vital capability, but it requires fresh, accurate data. Lexis® Visualfiles from LexisNexis Enterprise Solutions traditionally used an overnight ETL process to update data, but given the 24/7 nature of today's business world, that approach lost viability. With Progress® OpenEdge® Pro2™, LexisNexis was able to keep data up to date 24/7 and better support its clients' reporting needs.

Challenge

LexisNexis clients needed real-time reporting capabilities, but the overnight ETL solution for updating the database didn't support that.

> **OpenEdge Pro2 was the right solution at the right time that answered the challenges that we had… You can build any sort of report in any technology you choose. And that's incredibly powerful."**

Nigel Williams
Product Director, LexisNexis Enterprise Solutions

Solution

OpenEdge Pro2 replicates data to a desired target database in near-real time

OpenEdge Pro2 enables businesses to access critical data without straining their production database

The flexibility of OpenEdge Pro2 enables it to be embedded directly into LexisNexis

Results

OpenEdge Pro2 saved LexisNexis from having to hire staff to build its own data replication solution

With new reporting capabilities, LexisNexis clients can better serve customers and provide more value

Being embedded directly into LexisNexis instead of bolted on top simplifies application maintenance and management

→ **Replicate Your Data in Real-Time Without Disrupting Business Operations.**
