Mobilize.Net Uses Kendo UI to Modernize Legacy Applications

———

AT A GLANCE

mobilize.NET

As technology platforms age, so do the applications built on them. Mobilize.Net leverages Progress© Kendo UI© to help organizations stay relevant to their customers by migrating business-critical applications to modern technology stacks.

Challenge

To modernize business-critical applications without impacting the user experience, Mobilize.Net needed a reliable and versatile JavaScript UI component suite to build their own migration tools.

> "With Kendo UI, we've saved close to half a million dollars in human hours. But more importantly, we were trying to get a product to market. It would have taken a very long time to build the tests, validate them, update them and tune them had we not used Kendo UI."
>
> **John Browne,**
> Technical Product Manager at Mobilize.Net

Solution

A rich UI component suite with extensive functionality ensures complex desktop application are seamlessly replicated inside the browser.

With libraries for React, Angular, jQuery and Vue, Kendo UI accommodates any technology preference for a broad customer base.

Fast performance and responsiveness are key to handling data-heavy web applications that look, feel and behave as the original.

Results

Mobilize.Net shortened the time necessary to develop their core product by 90%.

The team saved approximately $500,000 in human hours.

The extensibility of the suite ensures applications can continue to evolve and stay modern.
